

WOODBRID vs Competitors

www.woodbrid.com

ASTM E-84

Other Brands

Thin coated PVC top layer:
Slippery when wet.
Gets very hot on sunny days.

Wood particles & PVC inner core.
Chips easy and exposes base layer.
Water penetration.

Solid mass inner core
Weak structure to support heavy weight;
meaning it will warp. Requires 12" frame
spacing. (Uses more material and labor).

Woodbrid Brands

Proudly made in the USA

Sanded & embossed surface:
Slip resistant. Plant fiber keeps the
surface temperature cooler.

**The same material
(Fiber & HDPE) throughout:**
Better long-term wear and tear.

Structure design:
Makes the composite decking stronger
and it wont warp. 16" space for framing,
save money on materials and labor.

Hybrid Wood products that last

Why Woodbrid

Enjoy a low-maintenance decking and siding with the color variation and textures of real wood. It's moisture repellence makes it ideal for rainy and coastal regions. Plus it maintains its color even in hot and dryer conditions, so you can expect long-lasting beauty.

Eco Friendly

Woodbrid products are made out of organic and mineral materials, and **absolutely no wood is used for its fabrication.**
